

## If you can't see it, you can't secure it.

Continuous, automated network assessment for MSPs

**Coming Soon:** AssetXpert automatically maps and assesses a customer's network with a focus on security

Networks today experience continuous change due to business evolution and the unfortunate increase in cyberattacks, especially against SMBs. Staying on top of the current asset inventory, network configuration and segmentation, security updates, and equipment becoming obsolete make network and security management a moving target.

Securing the network infrastructure has become a top MSP priority. Bad cyber threat actors are progressively targeting end-of-life network hardware and software. It is increasingly vital for MSPs to keep their customers' systems up to date, have a clear understanding of their network environment, and quickly know where to mitigate threats. To achieve success requires an ongoing accurate view of the network to secure and manage it, which can be difficult to achieve without continuous remote access.

## Achieving your business outcomes with Netformx AssetXpert

When launched, Netformx AssetXpert 3.0 will simplify and streamline the process of network and security assessment, analysis, and management. AssetXpert is an integrated, automated solution that IT and security teams can access in the cloud.

With Netformx AssetXpert, MSPs can achieve these business outcomes:

### Reduced firefighting through proactive knowledge of the network assets

- Ensure network resilience and prioritize equipment vulnerabilities by identifying needed security, asset expansions, replacements, and upgrades
- Identify network segmentations and opportunities to build a Zero Trust Network

### First-rate customer support through streamlined best practices

- Rapidly conduct deep, multi-vendor network assessments to understand the customer's network and identify areas for upgrade
- Easily conduct scheduled, automated, and accurate assessments to support their growing business needs and detect vulnerabilities

### Greater customer loyalty and stickiness as a trusted advisor

- Keep customers up to date with ongoing network assessments and insights and enhanced network device security
- Differentiate yourself with end-customer portal views and asset and renewal self-management

### AssetXpert provides:

**Recurring scans** to accurately reflect the actual state of the network equipment and topology

**Lightweight credential-less scans** that are detailed but do not disrupt production network activity

**A multi-vendor view** of network topology

**Comprehensive network analysis** to identify:

- EoX equipment that may be at risk
- Known vulnerabilities in network equipment identified by CVE and PSIRT
- Configuration weaknesses
- Topology and segmentation issues
- Network device BOM analysis (Cisco only)

**Integrates with Harmony Purple** – an all-in-one cyber security platform for continuous threat exposure reduction

## Netformx AssetXpert 3.0 provides AI-based network resilience

This substantially enhanced version of AssetXpert is part of the Netformx SaaS suite of tools and integrates three industry-leading SaaS solutions:

- **Netformx Discovery**, a longtime leader as a desktop network baselining solution, now provides automated, continuous remote network discovery from the cloud
- **Orchestra Group's Harmony Purple** solution combines multiple security tools into one for continuous threat exposure reduction
- **Netformx AssetXpert™** efficiently and effectively manages assets and inventory, and provides end customer portals

MSPs will provide better service and keep customer networks secure and high performing using AssetXpert 3.0's innovative cloud combination of sophisticated discovery, asset management, and security capabilities.

## Netformx AssetXpert simplifies and streamlines network and security assessment, analysis, and management

Growing network infrastructure threats are making it imperative to assess and analyze a network's status continuously and automatically. Netformx AssetXpert does exactly that with an integrated, automated SaaS solution that enables both security and network management to be based on the same up-to-date and accurate view of the network.

Through comprehensive discovery and analysis, Netformx AssetXpert ensures that networks are secure. In addition, AssetXpert identifies business opportunities, such as upsell, and reduces costs through the application of AI and automated analysis.

The result is safer networks and greater customer loyalty.

## About Netformx, an Orchestra Group Company

Netformx improves IT Solution and Managed Service Providers profitability and efficiency by providing actionable insights and positive business outcomes. Pre- and post-sale insights enable Solution Providers to accurately assess and design winning IT network proposals and to maximize Cisco VIP and Lifecycle Incentive program payouts. With up-to-date multivendor network discovery, MSPs can accurately quote IT network services and continuously monitor network assets leveraging AI security reasoning to ensure they are cybersecure. These business outcomes are the result of automated multivendor data gathering, analysis, and at-a-glance insights available in the cloud.
